

Every tree has a story. But how does it end?

We all know the value of trees, whether they are standing in a wooded grove, filling a log truck, or anchoring a family meal. Strangely, we don't value urban trees in quite the same way. Communities and homeowners plant and nurture trees to add beauty and value to the urban landscape. But these same trees are usually discarded when they need to be removed due to death, disease, or other causes.

Members of the Urban Wood Network want to tell a different story. We aim to find the highest and best use for every removed urban tree and to invest that value back into our homes and local communities.

URBAN WOOD
NETWORK

Want a better ending for your trees? We can help.

Are you planning to have a backyard tree removed?
Ask your arborist about wood reuse and recycling.

Does your community chip all of its removed urban trees?
Encourage your city to find higher value uses for the wood.

Planning wood purchases for a home improvement project?
Consider using local and sustainable urban wood!
